DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-9, and 11-31 are allowed.

Examiner's Statement of Reason for Allowance

2. The following is an examiner's statement of reasons for allowance for all claims:

Re claims 1, 9, 17, 24. The prior art fails to teach, or suggest, the limitations of: a method for assessing and/or managing risks for an organization, comprising the steps of: inventorying a plurality of assets of the organization, wherein each asset is defined to be one of an electronic asset type and a location asset type, and wherein the electronic asset type includes computers and networking equipment therefor and the location asset type includes physical locations where the electronic asset types are placed; identifying the plurality of assets, wherein at least a portion of the plurality of assets are identified by utilizing a computer to electronically scan the plurality of assets via a network; storing the identified assets electronically in the computer; identifying at least one criterion defining a security objective of the organization, and electronically storing the at least one identified criterion in the computer; identifying one or more inventoried assets that relate to the identified criterion by utilizing the computer; formulating one or more metric equations for each identified criterion by utilizing the computer, each metric equation being defined, in part, by the one or more identified assets, wherein each metric equation yields an outcome value when one or more measurements are made relating to the identified assets; and assessing the risk to the organization based on the measured values of the one or more metric equations by utilizing the computer. The

closest prior art, which is also the applicant's background of the invention, discloses the traditional assessment, identification and management of risk. However, the applicant background of the invention fails to disclose identifying at least one criterion defining a security objective of the organization, and electronically storing the at least one identified criterion in the computer; identifying one or more inventoried assets that relate to the identified criterion by utilizing the computer; formulating one or more metric equations for each identified criterion by utilizing the computer, each metric equation being defined, in part, by the one or more identified assets, wherein each metric equation yields an outcome value when one or more measurements are made relating to the identified assets; and assessing the risk to the organization based on the measured values of the one or more metric equations by utilizing the computer.

Furthermore, Kalyan (US PAT: 6266655), cited prior art, is directed to developing a monetary value of resources for a manufacturer based on market demand, such as future uncertain demand for various products. For example, Kalyan states that the disclosure is directed to "a method of valuing resources of an asset intensive manufacturer." (Kalyan: Abstract.) More specifically, Kalyan is directed to "valuing resources used to manufacture products" (Kalyan: col. 1, lines 43-45). Kalyan states that "an example of an asset intensive manufacturing is steel manufacturing." (Kalyan: col. 2, lines 49-50.) Further, Kalyan states "[v]alue management for asset intensive manufacturing is based on the following principle: Based on future uncertain demand for various products, expected prices for those products, and available capacities of resources during periods required to supply demand when demanded, a value for each

resource during those periods can be calculated." (Kalyan: col. 2, lines 54-59.) "The calculation results in threshold prices, referred to as minimum acceptable values (MAVs) for a given demand period." (Kalyan: col. 2, lines 59-61) Thus, Kalyan is directed to valuing resources of a manufacturer, and has nothing to do with formulating one or more metric equations for each identified criterion by utilizing the computer, each metric equation being defined, in part, by the one or more identified assets, wherein each metric equation yields an outcome value when one or more measurements are made relating to the identified assets.

Further still, Norton (US PUB NO.: 2002/0091699), another cited prior art, is directed to a system and method for managing asset information (Norton: Abstract). Norton disclose a variety of asset search options that enables a user not only to search for an asset, but also to view a range of detailed information about the selected asset (Norton: page 4, lines 85-87). Norton further discloses that the Asset tab 70 displays detailed asset information for the asset selected, and that such information may include the asset's serial number, tracking number, purchase order, manufacturer, model number, etc. (Norton: pages 4-5, lines 88-93.) Thus, Norton fails to teach or suggest "establishing at least one relationship between the pluralities of assets."

Lastly, Business Wire (Tangram's Asset Insight provides IT asset tracking. p 4161313, April 16, 1996) teaches IT asset tracking process. While Business Wire discloses that asset Insight offers managers intelligent decision support, enabling them to identify all hardware and software assets currently installed throughout the enterprise, to plot historical trends and to project future changes to their asset base, however asset

insight fails to identify at least one criterion defining a security objective of the organization, and electronically storing the at least one identified criterion in the computer; identify one or more inventoried assets that relate to the identified criterion by utilizing the computer; formulate one or more metric equations for each identified criterion by utilizing the computer, each metric equation being defined, in part, by the one or more identified assets, wherein each metric equation yields an outcome value when one or more measurements are made relating to the identified assets; and assess the risk to the organization based on the measured values of the one or more metric equations by utilizing the computer.

Updated searches revealed no references that disclosed the claimed inventions, nor were any secondary references identified which could be reasonably combined with the applicant's background of the Invention.

The drawings submitted on 01/02/2002 are acceptable. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
